ABOUT US

Şanpol Fiber Metal Technologies Construction Industry and Trade Inc. was established in 2016 and has been serving in the pool sector since the day it was founded and at the same time continues its efforts to become a company that aims to progress with great steps. Our company continues to provide domestic and international consultancy services within the scope of engineering and technical services, we produce the best fiberglass pools and offer the service to our valued customers and companies. Our Fiberglass Pool production facility, which is completely domestic production, is the largest Fiberglass Pool facility in the region with the feature of having a pool production capacity of 90 units per month.

Our company closely follows the world technology with its engineer and technician staff.

Our company, which operates in the field of fiberglass swimming pool production, contracting and material sales, has aimed to transfer its experience in this field to our valued customers with a team of specialized employees. While providing this service, we are aware that swimming pools are important for human health and require expertise. Our company has adopted the basic principle of specializing in the fields of activity and protecting the consumer in order to ensure that the service provided to you is healthy, trouble-free and of high quality. For this reason, we closely monitor and apply national and international standards during the project, design and construction phase. Our company, which provides free consultancy services on all kinds of issues from design to system selection; has been continuing to serve you with its experience and expanding references since 2016. For this purpose, it is our greatest wish and hope to work with you respected customers.

WHY IS THE FIBERGLASS POOL FIBERGLASS POOL

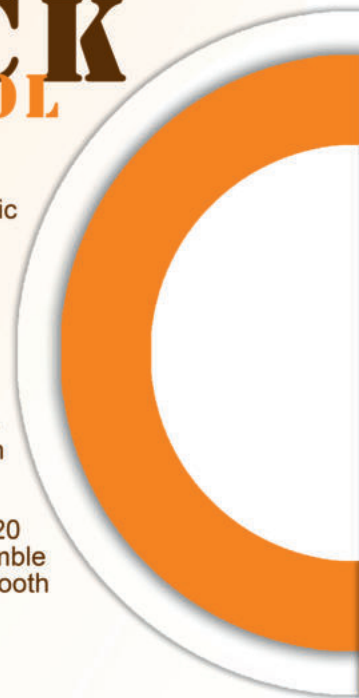

The advantages of Fiberglass Pool compared to alternatives (REINFORCED CONCRETE and LINER) are as follows;

1. Because it is a Monoblock, it has a 100% sealing feature.
2. Since the surface structure is smooth, (no joints, etc.) there are no unwanted problems such as calcification, algae and it does not require seasonal maintenance.
3. As an installation area, it provides the possibility of installation in 2 ways, on the ground and under the ground.
4. It shows the best resistance to heat changes due to its thermostable structure, which maintains its biological effect at certain high temperature degrees.
5. It has a flexible structure, this feature makes the pool even more resistant to impacts, jams and natural disasters from external factors and provides a long service life.
6. It provides the opportunity to treat extreme problems that may occur on internal and external surfaces in a short time.
7. It has the feature of short-term production and installation, thus providing advantages in terms of labor and cost.
8. When used, it requires less cleaning and maintenance than other pools. Therefore, maintenance costs are also lower.

MONOBLOCK FIBERGLASS POOL

Advantages of Monoblock Fiberglass Pool:

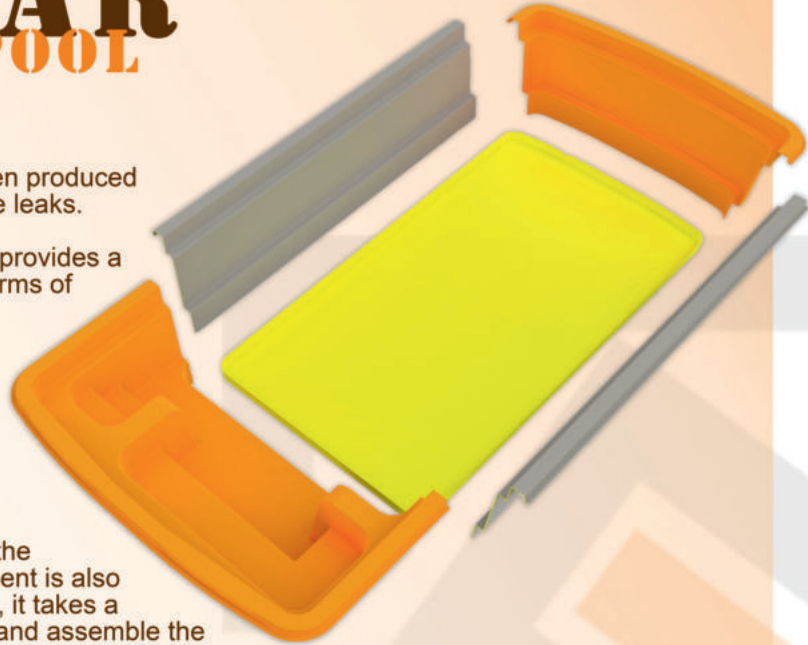

- The fact that the product has been produced monolithic has prevented possible leaks.
- The absence of joint gaps also provides a great advantage to the user in terms of seasonal cleaning of the pool. Cleaning the pool is a second-hand sale.
- The short installation time means that the inconvenience time given to the environment is also short.
 - During convenient weather conditions, it takes a maximum of 120 minutes to put on the ground and assemble the pool to a properly excavated and smooth ground (excluding filling).

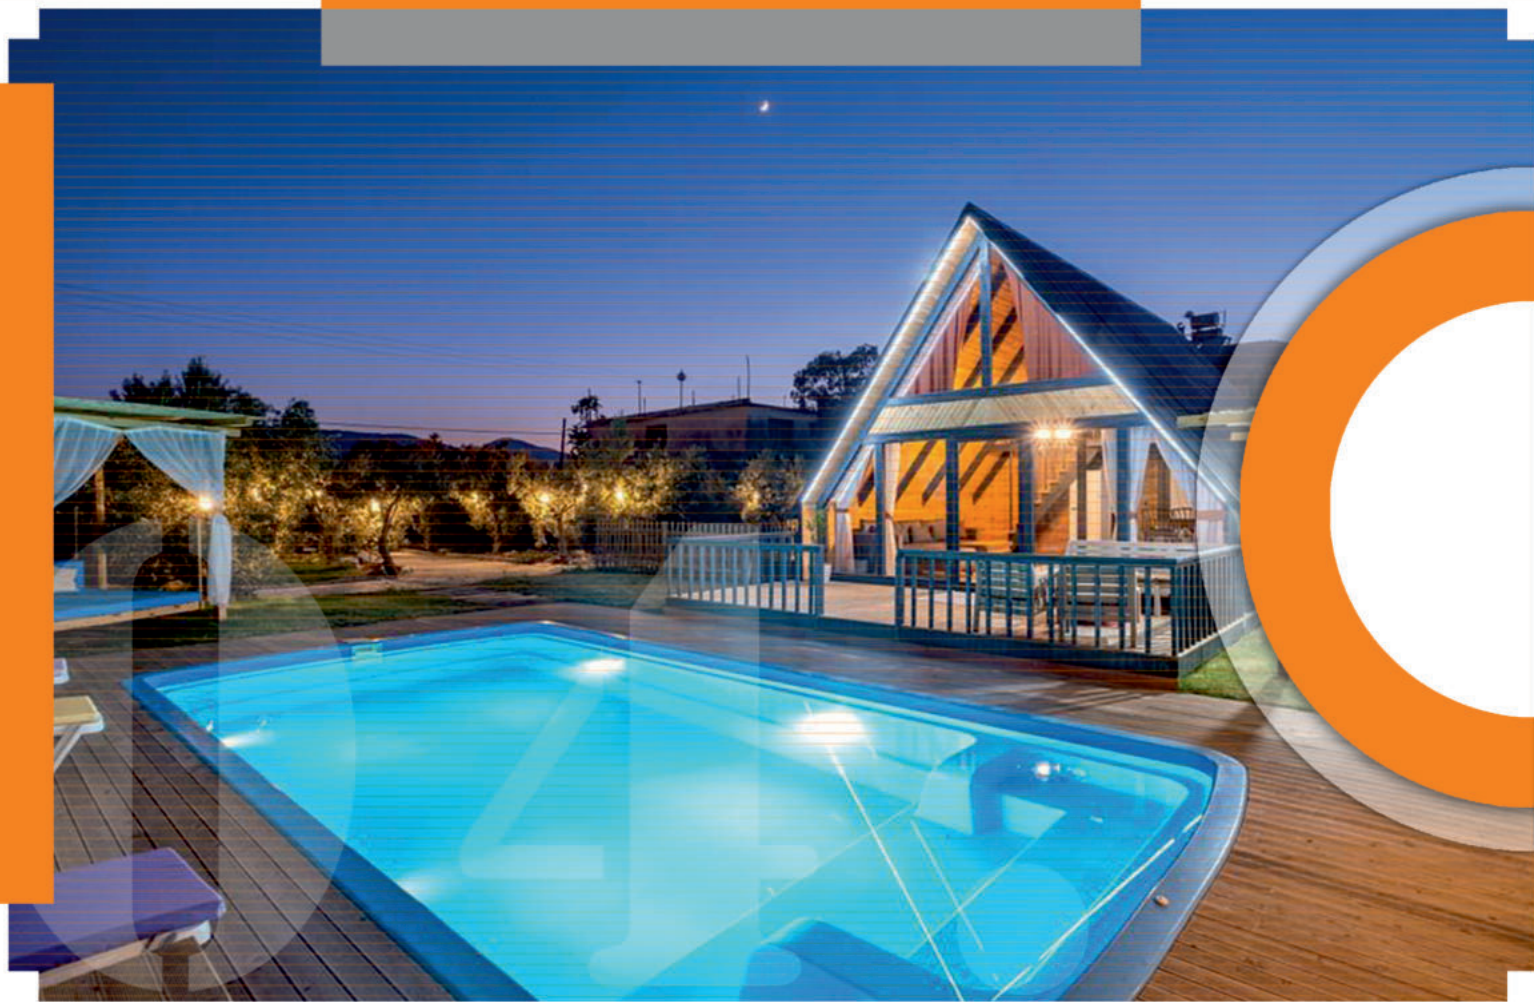

MODULAR FIBERGLASS POOL

Advantages of Monoblock
Fiberglass Pool :

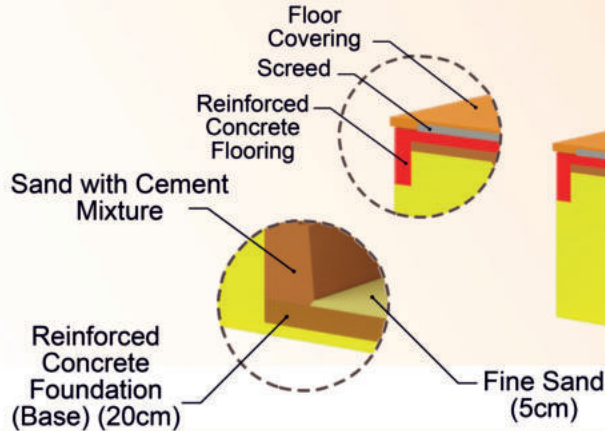

- The fact that the product has been produced monolithic has prevented possible leaks.
- The absence of joint gaps also provides a great advantage to the user in terms of seasonal cleaning of the pool. Cleaning the pool can also be done without draining the water.
- The Monoblock pool is suitable for changing location and is portable. Therefore, it is suitable for second-hand sale.
- The short installation time means that the inconvenience time given to the environment is also short. During convenient weather conditions, it takes a maximum of 120 minutes to put on the ground and assemble the pool to a properly excavated and smooth ground (excluding filling).

FIBERGLASS POOL TECHNICAL and Installation

- Excavation in the area where the pool will be established according to the measurements to be given by us.
- Pouring concrete on the excavation base in case of need. (The measure and qualification will be given by us.)
- Placement of the pool in its place.
- At the pool production stage, the installation of the fully completed fiberglass engine room is placed in a suitable area close to the pool.
- Installation of wiring connections between fiberglass engine room and the pool.
- After filling some water into the pool, performing testing operations by putting the pool mechanics into operation.
- Filling of the around of the pool as described by us.

About Us

"Continuous Quality"

Starting out with the principles , Sanpol realized its dynamics and set a target of "continuous quality".

Value added fiber products offered for enterprises and individuals , specializing in steel construction and production issues in Turkey's leading private company to be our biggest goal. While contributing to the development of the sector by using the latest technologies integrated, innovative, specialized staff and providing them with value added services. With the philosophy of continuous improvement, our success points are to maximize customer satisfaction, to establish efficient business partnerships, to be a leader in quality and technological developments, to support the development of our employees, to create motivation and job satisfaction.

We have received this power from our "values".
